

## Air Duct System Cleaning

**SingleSource**  
DISASTER RECOVERY SPECIALISTS

**401-274-4444 • [singlesource-usa.com](http://singlesource-usa.com)**

*Our professional, fully licensed and bonded technicians will clean not only your residential air ducts, but your entire HVAC system as well.*

### **Why Should I Get My Air Duct System Cleaned?**

Just as a mechanic regularly flushes a car's engine to keep it running efficiently, cleaning your home's heating and air conditioning (HVAC) system can lead to cleaner air, better performance, and lower energy bills.

Air duct system cleaning allows systems to run more efficiently by removing debris from sensitive mechanical components. Clean, efficient systems are less likely to break down. They also have a longer life span and operate more effectively than dirty systems.

The National Air Duct Cleaners Association (NADCA) recommends that air handling units be inspected at least once a year. The air ducts alone should be inspected at least once every two years. Things like pets, pollen, dust, renovation, and nearby construction can drastically affect the amount of dirt entering and clogging your home's air delivery system and possibly aggravating respiratory health issues like allergies or asthma as well as affecting your system's overall efficiency.

Over time, dust and debris build up on components of the system and if not cleaned, greatly decrease its overall efficiency. These contaminants significantly decrease air flow, resulting in your furnace or air conditioning unit consuming more energy to provide the desired level of comfort. Having a clean air flow system can increase efficiency up to 30 percent!

Ceiling Air Duct Vent Register

Accumulated Debris Inside Duct

***In addition to normal accumulations of dust and dirt found in homes, there are several other factors that can increase the need for air duct cleaning:***

- ***Pet Hair and Dander***
- ***Occupants with Allergies or Asthma***
- ***Cigarette or Cigar Smoke***
- ***Water Contamination or Damage***
- ***Renovation or Remodeling Projects***

The HVAC Inspection, Maintenance  
and Restoration Association

Single Source is a certified member NADCA, an national organization that tests the knowledge of contractors for safe and effective HVAC cleaning. A company must meet stringent requirements in order to be a member of NADCA. These requirements were developed in provide a higher level of assurance to consumers.

### A Clean System Can Help You Save

After considering that dirty systems use up to 30 percent more energy to heat and cool the home, dirty coils and air filters also block airflow through the system, increasing your energy bill and shortening the equipment's life.

### What to Expect – Air Duct System Cleaning Procedures:

- 1) Single Source's unique HEPA filtration vacuum system is connected to your main supply and return plenums.
- 2) Supply and return registers are removed and cleaned of all residue.
- 3) Through each vent, ducts are brushed and cleaned with compressed air attachments and all residue and debris is extracted through the HEPA filtration vacuum system.
- 4) The air handling unit is cleaned and sanitized.
- 5) Air filters are replaced.
- 6) A sanitizing antimicrobial agent is fogged through the entire system which is effective in eliminating and preventing bacterial, mold, and fungal spores.
